At Aegis Therapies, we know the work we do benefits everyone whose lives we touch—patients, employees, customers, caregivers and families. Not only can we see the positive results of our programs as patients achieve their goals, we also have the means of objectively measuring that progress.

Aegis Rehab Outcomes quantitatively demonstrate the difference you are making in your residents' lives in terms of the improvements in function they achieve as a result of treatment. This measurement tool provides you with specific information regarding average lengths of stay, functional gain scores, and the percentage of residents that were discharged to their homes. In addition to the clinical outcome scores themselves, we also record patient demographic and medical data as well as treatment data.

Since the inception of the Prospective Payment System in 1999, we have been collecting clinical outcome data for patients and have over four million patient records, the largest database for long-term care, therapy-based clinical outcomes in the industry!

Through Aegis Rehab Outcomes, you can request real-time reports from Aegis Therapies staff at any time, allowing for easy follow-up with referral sources and the ability to show the impact of their decision to refer the resident to your facility. In addition, the demographic analysis generated by Aegis Rehab Outcomes is invaluable in the development of marketing plans, thereby making it easier to position your facility as the rehab provider of choice in your community.

At Aegis Therapies, the results speak for themselves!
